Pathfinder Radar Scanners
Owners Handbook

March 2004

Intended Use
The scanner units detailed in this handbook form part of navigational radar systems intended for light marine use. These radar systems are only an aid to
navigation.

WARNING:
The 4D radome scanner connected to an SL70, SL70 PLUS or SL70RC PLUS 7” LCD display unit DOES NOT conform to the EU directive 95/5/EC, therefore such a system cannot be installed on a vessel within the EU.

Safety Notices
This radar equipment must be installed and operated in accordance with the instructions contained in this manual. Failure to do so can result in personal injury and/or navigational inaccuracies. In particular;

1. **High Voltage**. The scanner unit contains high voltages. Adjustments require specialized service procedures and tools only available to qualified service technicians – there are no user serviceable parts or adjustments. The operator should never remove the scanner unit internal covers or attempt to service the equipment.

2. **Electromagnetic Energy**. The radar scanner transmits electromagnetic energy. It is important that the radar is turned off whenever personnel are required to come close to the scanner to perform work on the scanner assembly or associated equipment.

   It is recommended that the radar scanner is mounted out of range of personnel (above head height).

   Do not look directly at the antenna at close range as your eyes are the most sensitive part of the body to electromagnetic energy.

   When properly installed and operated, the use of this radar will conform to the requirements of ANSI/IEEE C95.1-1992 Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 Hz to 300 GHz and

3. **Navigation Aid.** This radar unit is only an aid to navigation. Its accuracy can be affected by many factors, including equipment failure or defects, environmental conditions, and improper handling or use. It is the user’s responsibility to exercise common prudence and navigational judgements. This radar unit should not be relied upon as a substitute for such prudence and judgement.

Raymarine products are supported by a network of Authorized Service Representatives. For information on Raymarine products and services, contact either of the following:

The technical and graphical information contained in this handbook, to the best of our knowledge, was correct as it went to press. However, the Raymarine policy of continuous improvement and updating may change product specifications without prior notice. As a result, unavoidable differences between the product and handbook may occur from time to time, for which liability cannot be accepted by Raymarine.

SeaTalk is a registered trademark of Raymarine Limited. HSB and hsb² are trademarks of Raymarine Limited. Pathfinder is a trademark of Raymarine Limited.
Preface

This handbook describes the following Raymarine Pathfinder radar scanners:

- **2D** 18” 2 kW Radome Scanner
- **4D** 24” 4 kW Radome Scanner
- **5S** 48” 4 kW Open Array Scanner
- **7S** 72” 4 kW Open Array Scanner
- **9S** 48” 10 kW Open Array Scanner
- **11S** 72” 10 kW Open Array Scanner

These scanner units may be connected to any HSB/hsb² or C-Series display unit. In addition, the 2D radome scanner unit may be connected to an SL70, SL70 PLUS or SL70RC PLUS 7” LCD display.

**WARNING:**

The 4D radome scanner connected to an SL70, SL70PLUS or SL70RC PLUS 7” LCD display unit DOES NOT conform to the EU Directive 95/5/EC, therefore such a system cannot be installed on a vessel within the EU.

A 4D radome scanner connected to any other Pathfinder display unit including, SL70M PLUS, SL70MRC PLUS, SL70C PLUS and SL70CRC PLUS conforms in full and is not affected.

**CAUTION:**

The open array scanners must not be used with the SL70, SL70 PLUS, SL70RC PLUS or Autohelm 7” LCD Display Unit. This may result in damage to the display due to the high power requirements of the open array scanner.

The handbook contains very important information on the installation and operation of your new equipment. In order to obtain the best results in operation and performance, please read this handbook thoroughly.

Raymarine’s Technical Support representatives or your local dealer will be available to answer any questions you may have.

**Display Software Version**

For full operation of the Pathfinder scanners, the display unit requires an appropriate software version. For new displays, the correct software version is normally already installed in the display unit and is fully compatible with the Pathfinder scanners.

Early display units may not have the correct software and will therefore require upgrading.
The software version can be confirmed by switching-on the display and checking the version number during the magnetron warm-up sequence.

**Note:** If a scanner unit is not connected the version number is only displayed for 10 seconds.

Where necessary Software Upgrade Kits are available from your dealer, distributor or from Raymarine. We recommend that where a repeater display is fitted, both the repeater and the master display are upgraded.

**C-Series Display Compatibility**

To achieve full compatibility with a C-Series Display, your Raymarine radar scanner may require upgrading. Please refer to the C-Series Display *Owner’s Handbook*, or contact Technical Support for details.

The open array scanners cannot be powered from a C-Series display unit; they must be connected to ship’s power using a split pedestal cable or pedestal adaptor cable. Full details are provided in this handbook.

**Warranty**

To register your Pathfinder Radar Scanner ownership, please take a few minutes to fill out the warranty registration card found at the end of this handbook. It is very important that you complete the owner information and return the card to the factory in order to receive full warranty benefits.

The radome scanner package includes a barcode label indicating the serial number of the unit. This label should be stuck to the warranty registration card. The open array scanner has two barcode labels indicating the serial numbers of the pedestal and the antenna units. Both labels should be stuck to the warranty registration card.

**EMC Conformance**

All Raymarine equipment and accessories are designed to the best industry standards for use in the leisure marine environment.

The design and manufacture of Raymarine equipment and accessories conform to the appropriate Electromagnetic Compatibility (EMC) standards, but correct installation is required to ensure that performance is not compromised.

**Declaration of Conformity**

The following Declarations of Conformity, RT031, RT032, RT033, RT035, RT038, RT039, RT040 and RT041 apply to the equipment described in this handbook.
We, Raymarine Limited, Anchorage Park, Portsmouth, Hampshire, England PO3 5TD, declare, under our sole responsibility, that the products identified in this declaration, and to which this declaration relates, are in conformity with the essential requirements of European Parliament and Council Directive:

1999/5/EC on radio equipment and telecommunication terminal equipment and the mutual recognition of their conformity.

Specifically this declaration includes conformity to ITU Radio Regulations on Unwanted Emissions of Radar Systems.

Product Name: Raymarine 2D – 2kW, 18” Radome Scanner Unit
Product Number(s): M92650, from S/n 1222000
Ancillary Units: ‘PLUS’ Displays - details given on Sheet 2

The products have been assessed to Conformity Procedure Annex IV of the Directive and by application of the following standard(s):

- **EMC**: EN 60945 : 2002
- **Health & Safety**: EN 60945 : 2002
- **Out of Band Emissions**: ITU-R M1541
- **Spurious Emissions**: ITU-R M1197-2

The assessment is consistent with a Technical Construction File showing conformity with the essential requirements of the Directive and has been reviewed by Notified Body No. 0191.

The product is labelled with the CE conformity marking, the identification number of the Notified Body and class identifier.

EC Declaration of Conformity

We, Raymarine Limited, Anchorage Park, Portsmouth, Hampshire, England PO3 5TD, declare, under our sole responsibility, that the products identified in this declaration, and to which this declaration relates, are in conformity with the essential requirements of European Parliament and Council Directive:

1999/5/EC on radio equipment and telecommunication terminal equipment and the mutual recognition of their conformity.

Specifically this declaration includes conformity to ITU Radio Regulations on Unwanted Emissions of Radar Systems.

Product Name: Raymarine 4kW Open Array Scanner Unit
Product Number(s): M92654
Ancillary Units Details are given on Sheet 2

The products have been assessed to Conformity Procedure Annex IV of the Directive and by application of the following standard(s):

- **EMC:** EN 60945 : 1997
- **Health & Safety:** EN 60945 : 1997
- **Out of Band Emissions:** ITU-R M1541
- **Spurious Emissions:** ITU-R M1177-2

The assessment is consistent with a Technical Construction File showing conformity with the essential requirements of the Directive and has been reviewed by Notified Body No. 0191.

The product is labelled with the CE conformity marking, the identification number of the Notified Body and class identifier.

Sheet 2 of 2
EC Declaration of Conformity

We, Raymarine Limited, Anchorage Park, Portsmouth, Hampshire, England PO3 5TD, declare, under our sole responsibility, that the products identified in this declaration, and to which this declaration relates, are in conformity with the essential requirements of European Parliament and Council Directive:

1999/5/EC on radio equipment and telecommunication terminal equipment and the mutual recognition of their conformity.

Specifically this declaration includes conformity to ITU Radio Regulations on Unwanted Emissions of Radar Systems.

Product Name: Raymarine 10kW Open Array Scanner Unit
Product Number(s): M92655
Ancillary Units Details are given on Sheet 2

The products have been assessed to Conformity Procedure Annex IV of the Directive and by application of the following standard(s):

- EMC: EN 60945 : 1997
- Health & Safety: EN 60945 : 1997
- Out of Band Emissions: ITU-R M1541

The assessment is consistent with a Technical Construction File showing conformity with the essential requirements of the Directive and has been reviewed by Notified Body No. 0191.

The product is labelled with the CE conformity marking, the identification number of the Notified Body and class identifier.

EC Declaration of Conformity

We, Raymarine Limited
Anchorage Park
Portsmouth
Hampshire
England PO3 5TD

declare, under our sole responsibility, that the products identified in this declaration, and to which this declaration relates, are in conformity with the essential requirements of European Parliament and Council Directive:

1999/5/EC on radio equipment and telecommunication terminal equipment and the mutual recognition of their conformity.

Specifically this declaration includes conformity to ITU Radio Regulations on Unwanted Emissions of Radar Systems.

Product Name: Raymarine 2D – 2kW, 18” Radome Scanner Unit
Product Number(s): M92650, from S/n 1222000
Ancillary Units C-series Displays - details given on Sheet 2

The products have been assessed to Conformity Procedure Annex IV of the Directive and by application of the following standard(s):

EMC EN 60945 : 2002
Health & Safety EN 60945 : 2002
Out of Band Emissions ITU-R M1541
Spurious Emissions ITU-R M1177-2

The assessment is consistent with a Technical Construction File showing conformity with the essential requirements of the Directive and has been reviewed by Notified Body No. 0191

The product is labelled with the CE conformity marking, the identification number of the Notified Body and class identifier.

Chapter 1: Overview

1.1 Introduction

This handbook provides instructions to assist you in the installation and set up of the following radar scanners:

- 2D 18” 2 kW Radome Scanner
- 4D 24” 4 kW Radome Scanner
- 5S 48” 4 kW Open Array Scanner
- 7S 72” 4 kW Open Array Scanner
- 9S 48” 10 kW Open Array Scanner
- 11S 72” 10 kW Open Array Scanner

These scanner units may be connected to any HSB/hsb2 or C-Series display unit. In addition, the 2D radome scanner may be connected to an SL70, SL70 PLUS or SL70RC PLUS 7” LCD display unit.

Note: To achieve full compatibility with a C-Series Display, your Raymarine radar scanner may require upgrading. Please refer to the C-Series Display Owner’s Handbook, or contact Technical Support for details.

A typical Pathfinder Radar system is illustrated below.
CAUTION:
Do not use an open array scanner with an SL70, SL70 PLUS or SL70RC PLUS 7” LCD display unit. Failure to observe this may result in permanent damage to these display units.
The 10 kW open array scanner requires 24 V or higher; it will not operate on 12 V systems.

This handbook is divided into three chapters as follows:

Chapter One provides information to help you plan the scanner installation. It includes sections on Unpacking and Inspecting the Components, Selecting the Scanner Site, Cable Requirements and Power Requirements.

Chapter Two provides detailed instructions on how to mount and connect each type of scanner.

Chapter Three provides instructions on how to perform the system checks, alignment and adjustments. It also provides information on maintenance and what to do if you have problems.

EMC installation guidelines
All Raymarine equipment and accessories are designed to the best industry standards for use in the leisure marine environment.

Their design and manufacture conforms to the appropriate Electromagnetic Compatibility (EMC) standards, but correct installation is required to ensure that performance is not compromised. Although every effort has been taken to ensure that they will perform under all conditions, it is important to understand what factors could affect the operation of the product.

The guidelines given here describe the conditions for optimum EMC performance, but it is recognized that it may not be possible to meet all of these conditions in all situations. To ensure the best possible conditions for EMC performance within the constraints imposed by any location, always ensure the maximum separation possible between different items of electrical equipment.

For optimum EMC performance, it is recommended that wherever possible:

- Raymarine equipment and cables connected to it are:
  - At least 1 m (3 ft) from any equipment transmitting or cables carrying radio signals e.g. VHF radios, cables and antennas. In the case of SSB radios, the distance should be increased to 2 m (7 ft).
  - More than 2 m (7 ft) from the path of a radar beam. A radar beam can normally be assumed to spread 20 degrees above and below the radiating element.
• The equipment is supplied from a separate battery from that used for engine start. Voltage drops below 10 V (20 V for 10 kW open array scanners) in the power supply to our products, and starter motor transients, can cause the equipment to reset. This will not damage the equipment, but may cause the loss of some information and may change the operating mode.

• Raymarine specified cables are used at all times. Cutting and rejoining these cables can compromise EMC performance and so must be avoided unless doing so is detailed in the installation manual.

• If a suppression ferrite is attached to a cable, this ferrite should not be removed. If the ferrite needs to be removed during installation it must be reassembled in the same position. Section 2.1, Radome scanner includes instructions on fitting a ferrite.

The following illustration shows a typical range of suppression ferrites fitted to Raymarine equipment.

Connections to Other Equipment

If your Raymarine equipment is to be connected to other equipment using a cable not supplied by Raymarine, a suppression ferrite MUST always be fitted to the cable close to the Raymarine unit.

1.2 Unpacking and inspecting the components

Unpack your system carefully, to prevent damage to the equipment. It is good practice to save the carton and packing for future use, in case you need to return the unit for service. Check that you have all the correct system components. These depend on your system package, as detailed in the following tables.

**Software Upgrade Kit**

Please contact your authorized dealer or distributor for details.
1.3 Selecting the scanner unit site

This section provides information that affects the possible locations of the scanner, and its position relative to the display unit and to the power supply.

The dimensions of the each scanner unit are shown in the following diagrams.

Selecting the best location for the scanner unit requires careful consideration of the following points, to ensure reliable and trouble free operation:

**Note:** In order to minimize potential interference to other systems on board ship (EMC), it is advisable to mount the scanner on a part of the boat that is insulated from the ship’s battery negative. If you cannot do this, and encounter problems, you can fit insulating bushes between the scanner and its mounting bracket.

- **Height:** The scanner unit should normally be mounted as high as practical above the waterline, for three reasons:
  - For safety reasons the scanner should be out of range of personnel, preferably above head height. This avoids mechanical danger and electromagnetic contact, particularly with the eyes.
  - Radar operates at the line-of-sight, so a high mounting position gives better long range performance.
  - Surrounding large objects, in the same horizontal plane, can interfere with the radar signal and cause blind areas or shadow sectors and false targets on the radar screen (see below).

However, do not mount the scanner so high that it is affected by the pitching and rolling of the vessel. In addition, you may need to lower the scanner to avoid creating a shadow sector underneath the scanner’s beam.
6 Pathfinder Radar Scanners

18" Radome Scanner

- Weight: 6.5 kg (14.3 lbs)
- Compass safe distance: 1 m (33 in)

24" Radome Scanner

- Weight: 7.5 kg (16.5 lbs)
- Compass Safe Distance: 1 m (33")
Open Array Scanners

- **48"**: 1306 mm (51.4 in), **72"**: 1928 mm (75.9 in)

**Centre of rotation**

- 100 mm (4 in)
- 427 mm (16.8 in)

**Weight**

- Pedestal: 24 kg (53.0 lb)
- 48" Open Array: 6 kg (13.2 lb)
- 72" Open Array: 9.4 kg (20.7 lb)

**Compass Safe Distance**: 1 m (33 in)

**Minimum clearance height**: 510 mm (20.1 in)

**Minimum clearance**: 630 mm (24.8 in)
• **Access**: The scanner unit site should be easily accessible to allow maintenance to be carried out safely.

• **Magnetic compass**: Mount the scanner unit at least 1 m away from a magnetic compass.

• **Cable run**: The maximum length of cable between the display unit and the scanner unit should not normally exceed 20 m (60 ft) for radome scanners, or 15 m (45 ft) for open array scanners. If you need to use a longer cable, power cable lengths must be considered; refer to Section 1.4 Cable Runs to determine appropriate lengths.

• **Shadow sectors and false echoes**: Mount the scanner away from large structures or equipment, such as the fly bridge, large engine stacks, searchlights, horns, or masts. It is particularly important to avoid shadow sectors near the bow. Raising or even lowering the scanner may help to reduce these effects.

In shadow areas beyond the obstruction there will be a reduction of the beam intensity, although not necessarily a complete cut-off; there will be a blind sector if the subtended angle is more than a few degrees.

In some shadow sectors the beam intensity may not be sufficient to obtain an echo from a very small object, even at close range, despite the fact that a large vessel can be detected at a much greater range. For this reason the angular width and relative bearing of any shadow sector must be determined at installation. Sometimes shadowing can be seen by increasing the radar gain until noise is present. Dark sectors indicate possible shadowed areas. This information should be posted near the display unit and operators must be alert for targets in these blind sectors.

It should also be noted that wet sails create shadow areas and thus sailboat operators should be aware that radar performance may reduce in rain.

If you mount the scanner on a mast, echoes from the mast may appear on the radar display. These can be minimized by placing absorbing material, such as a block of wood, between the scanner and mast.

• **Platform rigidity/stability**: The scanner platform should not twist (causing bearing errors) or be subject to excessive vibration.

• **Heat/fumes**: Mount the scanner away from the top of exhaust stacks, since the scanner and cables can be damaged by excessive heat and the corrosive effects of exhaust gases.

For open array scanners you should also consider the following points:
• **Mounting Platform:** The platform must be mechanically secure and capable of supporting the mass and inertia of the open array scanner. The complete unit weighs: 48” scanner - 30 kg (66.2 lb); 72” scanner - 33.4 kg (73.7 lb).
• The site must be clear of ropes and moving rigging.
• Sufficient clearance must be allowed to fully open the open array pedestal for maintenance.

**Mounting surface: sailboats**

The scanner unit can be installed on a mast platform, an arch, or a bridge structure. Make sure that the platform surface is flat and the scanner unit drain hole (radome scanners) is not obstructed. Raymarine recommends that radome scanner units are best suited for sailboat operation as open array systems are more difficult to protect from ropes and sails.

For sailboat installations, Raymarine offers a universal mast mount kit for each radome scanner type. This optional mount is used to fit a radome scanner to a flat surface on a mast with a minimum diameter of 60 mm (2 ½ in). When using the mast mount kit, appropriate hardware should be used for the style and structure of the mast aboard the vessel. Typically, the scanner will be mounted near the first set of mast spreaders. If there is any doubt concerning the appropriate type of hardware, consult your boat dealer or representative for their recommendations.

Depending on the type of sailboat, a radar scanner guard should be installed if the sails could touch the scanner or platform. Without a proper radar guard the mounting platform and the radar scanner could be severely damaged.

**Mounting surface: power boats**

On many small vessels the scanner unit can be installed on a mast platform, an arch, or a bridge structure, but take care to follow the scanner site guidelines, particularly regarding height. If necessary, construct a radar mounting platform to obtain a sufficiently high mounting position. Make sure that the platform surface is flat and the scanner unit drain hole (radome scanners) is not obstructed. Ensure the platform is strong enough to support the maximum shock loads likely to occur.
Setting the radiation plane

The scanner unit should be mounted so that the array rotates parallel to the waterline. The radar beam is approximately 25° wide in the vertical direction, providing good target detection during the vessel’s pitching and rolling.

Planing hull vessels, and some displacement hull vessels, adopt a higher bow angle when the vessel is at its cruising speed. In many cases this substantially alters and raises the radar’s main radiation plane, and can cause poor detection of nearby targets. It may be helpful to lower the radar beam back towards the parallel, by shimming the rear of the radar, so that the beam points slightly downwards with respect to the waterline when the vessel is at rest.

The shims may be made from aluminium plate wedges, simple flat washers, or an angled wooden block. For thick shims, you may need longer securing bolts than the M8x40 bolts supplied with the radome scanner, or the M10 studding supplied with the open array scanners.
1.4 Cable Requirements

This section provides details on selecting the appropriate cables for your system. Permissible cable lengths depend on the scanner type and the boat’s power system. Information on inter-unit and power cables is provided for both radome and open array scanners in the following sections.

You need to consider the following before installing the cables:

- You need to connect the scanner to the display unit and to power. The cable required depends on the display unit and the scanner type as described below.
- All cables should be adequately clamped and protected from physical damage and exposure to heat - avoid running cables through bilges or doorways, or close to moving or hot objects.
- Acute bends must be avoided.
- Where a cable passes through an exposed bulkhead or deckhead, a water-tight gland or swan neck tube should be used.
- Avoid cutting and re-joining cables (if necessary, refer to the notes below).

Scanner Cables

The cable used to connect your scanner to the display unit and power depends on the type of scanner and display as follows:

- A radome scanner connected to a Pathfinder or C-Series display requires an inter-unit cable. The scanner receives power via the display unit, the power cable is supplied with the display unit but cable details are provided in this section.
- An open array scanner connected to a Pathfinder display requires an inter-unit cable. The scanner receives power via the display unit, the power cable is supplied with the display unit but cable details are provided in this section.
- An open array scanner cannot be powered from a C-Series Display; it requires a split pedestal cable which combines the inter-unit and power cores.
- If you are connecting a C-series display to an existing open array scanner unit with a standard inter-unit cable, you can use the adaptor cable instead of the split pedestal cable; connect the adaptor between the inter-unit cable and the display.

These cables are illustrated in the following diagram. Cable lengths and part numbers are listed in Unpacking and inspecting the components on page 3.

CAUTION:
The cable for connecting an open array scanner to a C-series display cannot be extended.

</tbody>
</table>
Running the cable to the scanner

CAUTION:
Do not pull the cable through bulkheads using a cord attached to the connector. This could damage the connections.

The cable entrance is at the rear of the scanner unit. If the unit is mounted on a hollow mast the cable may be run inside the mast and then fed through the radar’s cable entrance. Make sure that the cable does not chafe where it enters and exits the mast.

Note: Route the cable from the display up to the scanner, since this will require the smallest clearance hole.

Rejoining cables

You should avoid cutting and re-joining cables. If this is necessary you must:

- Fit a ferrite on each side of the join. The specific ferrite to use depends on the cable type - contact Raymarine for details.
- Take care not to damage any of the wires. Make sure that all the wires and, in particular, the screen are reconnected correctly.

If you are mounting the scanner on the mast of a sailboat, and will need to unstep the mast, you should install a suitable junction box inside the boat.

On a radome scanner, the junction box should provide an 11- or 13-way terminal strip, depending on the number of power cores in your cable with a 10 A rating. Also, you should keep the length of the un-screened coaxial cores to less than 30 mm to maintain EMC conformance.

On an open array scanner, the junction box should provide a 13-way terminal strip with a 20 A rating for power cores. It is essential that all 4 power cores are connected and that the connection is of very low resistance as considerable power passes through this connection. Also, you should keep the length of the un-screened coaxial cores to less than 30 mm to maintain EMC conformance.

CAUTION:
The display connector on the scanner cable is a moulded plug that cannot be replaced. DO NOT remove this moulded plug.

The minimum bends permitted are:

- Minimum bend, light cable 60 mm (~2.5 in) radius
- Minimum bend, heavy cable 82 mm (~3.75 in) radius
Radome scanner cables

Inter-unit cable

The radome inter-unit cable is fitted with an 8-way plug and power cores (covered by a clear protective sleeve) for connecting to the scanner.

The length of the supplied cable should be sufficient to complete the cable run required on most small vessels. For longer runs, additional or replacement cables are available, which have 4 power cores to minimize voltage drops over the longer cable run: these optional cables include 5 m and 10 m extension cables, and a 25 m replacement cable.

The maximum inter-unit cable length is limited by the minimum supply voltage, the scanner type (18” or 24” radome), and the cable type (2 or 4 power cores): if a mix of light and heavy cables is used, only 2 power cores are connected through.

For vessels with 12 V power systems, the recommended cable(s) for different run lengths are given in the following table, which assumes a minimum supply voltage of 10.7 V (the lowest voltage likely to be reached by a 12 V battery in normal marine use). Do not use cable combinations that are not included in the table.

Notes: (1) For vessels with 24 V power systems, any combination of inter-unit cables can be used.
(2) This table applies to systems using the standard 1.5 m power cable. If you extend the power cable you may need to select different inter-unit cable(s), as discussed in the following section Power Cable.

Refer to the packing list in Unpacking and inspecting the components on page 3 for cable part numbers
Power cable

The radome radar systems are intended for use on ships’ DC power systems operating in the range 10.7 to 32 V DC (that is, 12 V and 24 V systems; not 32 V systems).

A 1.5 m (5 ft) power cable is supplied (with the display unit) for connecting the ship’s DC power to the radar scanner via the display unit. Refer to the Display Unit Owner’s Handbook for details on connecting this cable. This section provides details for extending the length of the power cable.

If a longer power cable run is required, use the supplied power cable to connect to the display unit. Then use a suitable connector block to connect the free end to the extension cable. The supplied power cable has a cross-section of 2.0 mm².

Note: For vessels with 24 V power systems, the power cable may be extended by up to 20 m using a wire gauge of 1.5 mm² (AWG 16) or greater, irrespective of the inter-unit cable length.

For vessels with 12 V power systems, longer power cable runs may require larger wire gauges to minimize any voltage drop in the cable. The type of scanner, type of inter-unit cable and cable length also affect the wire gauge required for the extension power cable.

To determine the correct supply cable size:

1. Estimate the length of cable between the ship’s main power source and the connector block.
2. Use the followings tables (one for each scanner size) to determine, for each inter-unit cable combination, the wire size required for that length.

For example, you might have a 24” scanner, with 20 m between the scanner and display unit, that you plan to connect by extending the supplied 15 m heavy inter-unit cable with a 5 m extension cable. In addition, your 12 V power supply might be 10 m from the display unit, requiring an extension of 8.5 m. To determine the wire gauge required for the power cable extension, refer to the table for the 24” scanner, go to the row labelled 15 m Heavy + 5 m ext, and read across until you come to a maximum cable length greater than 8.5 m. This is the 10 m entry, in the column for 4.0 mm² wire gauge.
Note: If you have an 18” radome scanner, and the wire gauge required for your extended power cable is unacceptably large, you should replace the supplied light (2 power core) inter-unit cable with the 25 m heavy (4 power core) inter-unit cable assembly (see table).

Open array scanner cables for Pathfinder displays

Inter-unit cable

The Pathfinder display inter-unit cables have a connector plug at one end for connecting to the display unit or extension cable; the other end is prepared ready to fit to the power and signal connectors (see Section 2.2).

Heavy duty cables are available in 15 m and 25 m lengths which should be sufficient to complete the cable run required on most small vessels. For longer runs, 5 m and 10 m extension cables are available, both have 4 power cores to minimize voltage drops over the cable run and incorporate in-line moulded plugs.

The maximum inter-unit cable length is limited by the minimum supply voltage and the scanner type.

**CAUTION:**

10 kW scanner systems cannot be used directly with 12 V systems; they require a 12 V to 24 V converter rated to 180 W. Contact your authorized Raymarine dealer or distributor for details.

12 V Systems (4 kW scanners only)

For vessels with 12 V power systems, the recommended cable(s) for different run lengths are given in the following table, which assumes a minimum supply voltage of 10.7 V (the lowest voltage likely to be reached by a 12 V battery in normal marine use). Do not use cable combinations that are not included in the table.

Table 1-6: Recommended 4 kW Open Array Scanner Inter-Unit Cable(s) for Vessels with 12 V Power Systems

Refer to the packing list in Section 1.2 for cable part numbers

24 V and 32 V Systems - 4 kW scanners

For vessels with 24 V and 32 V power systems, any combination of inter-unit cable up to a maximum length of 35 m can be used.
24 V and 32 V Systems - 10kW scanners
10 kW open array scanners can use any combination of inter-unit cable up to a maximum length of 35 m. However, these systems use considerable power and installations should be planned to minimize all cable lengths. Refer to the tables on page 1-19, Max. Extension Power Cable Lengths (m) - 10 kW Scanner.

Power cable
The open array scanner systems are intended for use on ships’ DC power systems operating in the following ranges:

<table>
<thead>
<tr>
<th>Power Level</th>
<th>Voltage Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 kW</td>
<td>10.7 to 44 V DC range (that is, 12 V, 24 V and 32 V systems)</td>
</tr>
<tr>
<td>10 kW</td>
<td>20 to 44 V DC range (that is, 24 V and 32 V systems)</td>
</tr>
</tbody>
</table>

**CAUTION:**
Do not use the open array scanner with an SL70, SL70 PLUS, SL70RC PLUS or Autohelm 7” LCD display unit. Failure to observe this may result in permanent damage to the display unit.

10 kW open array scanner systems cannot be used directly with 12 V systems; they require a 12 V to 24 V converter rated to 180 W. Contact your authorized Raymarine dealer or distributor for details.

Open array scanners draw considerable power from the vessels power source, especially in high wind speeds. It is essential for reliable operation that the unit is supplied with a low resistance power cable system, especially when operated from a 12 V power system.

12 V systems (4 kW scanners only)
Extensions to the supplied power cable must be kept to a minimum and the power should be fed directly from the output of the battery isolator switch via its own dedicated cable system. It is recommended that no additional power switch is included in this power cable.

**CAUTION:**
The display unit does not include a fuse for scanner power, so an in-line fuse or circuit breaker **MUST** be included in the power cable.

All power connections must be of high quality to minimize their resistance and to remove the risk of accidental shorts. Recommended maximum power cable extensions are given in the table below. These figures relate to the total cable extension, from the end of the supplied 1.5 m power cable to the system battery terminals. Do not exceed these lengths as unreliable operation may result.
Note: If the required extension results in unacceptably large diameter cables, use two or more smaller gauge wires to achieve the required copper wire cross-section. For example, using two pairs of 2 mm² is equivalent to using two single 4.0 mm² cables.

24 V and 32 V systems
These systems are less sensitive than 12 V systems to voltage loss in the power cables. However, it is still necessary to use adequate cables to prevent excessive power loss. The table below gives the recommended wire gauge for different power cable extension lengths. Raymarine recommends that power is fed directly from the output of the battery isolator switch via its own dedicated cable system.

CAUTION:
The display unit does not include a fuse for scanner power, so an in-line fuse or circuit breaker MUST be included in the power cable.

Note: If the required extension results in unacceptably large diameter cables, use two or more smaller gauge wires to achieve the required copper wire cross-section. For example, using two pairs of 2 mm² is equivalent to using two single 4.0 mm² cables.

Open array scanner cables for C-series displays

A split pedestal cable is required to connect a compatible open array scanner to
the display unit and to the power source.
If you are connecting an existing compatible scanner to a C-Series display a
pedestal adaptor cable can be used instead of the split pedestal cable.

CAUTION:
Do not extend the split pedestal or pedestal adaptor cable.

Split pedestal cable
The split pedestal cable combines the inter-unit and power cores, divided by a
Y junction. One core has a connector plug for connecting to the display unit, the
other core is for connecting to power. The scanner end is prepared ready to fit to
the power and signal connectors (see Section 2.2).

Two cable lengths are available:
• 25m cable provides 25m from scanner to Y junction.
• 15m cable provides 15m from scanner to Y junction.
These lengths should be sufficient to complete the cable run required on most
small vessels.

Pedestal adaptor cable
The pedestal adaptor cable combines the inter-unit and power cores, divided by a
Y junction. One core has a connector plug for connecting to the display unit, the
other core is for connecting to power. The scanner end has a connector plug for
fitting to an existing inter-unit cable.

1.5 Power Requirements

Note: Open array scanners connected to a Pathfinder display and all radome scanners re-
ceive power from the display unit via the inter-unit cable. The display power cable is sup-
plied with the display unit and details for connecting power are provided in your display
unit Owner’s Handbook. However, you should be aware of the information provided in this
section.

The DC system should be either:
• Negative grounded, with the negative battery terminal connected to the
  ship’s ground.
• Floating, with neither battery terminal connected to the ship’s ground.

CAUTION:
This radar is not intended for use on “positive” ground vessels.
The power cable Earth screen connections must be connected to
the ship’s ground.
Grounding the radar system
It is important that an effective RF ground is connected to the radar system.
You must ground the radar by connecting the drain wire (screen) of the power
cable to the nearest ground point of the ship's RF ground system. Refer to your
display unit Owner's Handbook for details.
If you need to extend the wire, the extension wire should be an 8 mm braid or
AWG 10 (6.0 mm²) multi-stranded cable.
If your vessel does not have an RF system, connect the drain wire to the negative
battery terminal.
Note: Use only this ground connection.

Power Connections
The power connection to the radar should be made at either the output of the
battery isolator switch, or at a DC power distribution panel. Raymarine
recommends that power is fed directly to the radar via its own dedicated cable
system and MUST be protected by a thermal circuit breaker or fuse, fitted close to
the power connection. Refer to the table below for isolator switch, circuit breaker
or fuse value ratings. Check all terminal connections are clean.

CAUTION:
If you do not have a thermal circuit breaker or fuse in your power
circuit, e.g. fitted to the DC distribution panel, you MUST fit an in-
line breaker or fuse to the positive (red) lead of the power cable.

* 10 kW scanners cannot be directly connected to 12 V
** Radome systems cannot use 32 V.
Chapter 2: Installing the Scanner

2.1 Radome scanner

Securing the radome scanner to the mounting surface

**CAUTION:**
The drain tube must always be used, but may be shortened if necessary

1. Using the paper template supplied with the scanner mounting kit, mark the flat mounting surface with the mounting holes and drain tube hole, and drill the holes as indicated on the template.

   If it is impractical to drill a hole for the drain tube, then the scanner unit should be mounted on 4 suitable spacers 10 mm high and the drain tube length reduced by 10 mm. It will then be clear of the flat surface and can still perform its function.

**Notes:**
(1) If you are using a Raymarine mast mount bracket, the surface is pre-prepared.
(2) If you are mounting the scanner on a flat surface, you may find it easier to fit the drain tube, as described in the following section, before securing the scanner.

2. Position the scanner on the mounting surface, ensuring that the cable inlet is pointing aft.

3. Locate the bolts and washers supplied with the scanner and grease the bolts. Fix the bitumen washers to the mounting surface then secure the scanner to the mounting surface as shown in the following diagram. Tighten the bolts to 20 Nm (14.7 lb ft.); ensure the scanner is tightly fitted.
You may need to use longer M8 mounting bolts to secure the scanner if you have used shims to lower the radar beam.

**Connecting the radome scanner inter-unit cable**

**CAUTION:**

_Before wiring the scanner unit, make sure that the inter-unit cable is not connected and power is not applied to the display unit._

When you have run the inter-unit cable to the scanner location, connect the cable as follows:

1. Loosen the 4 (18") or 7 (24") screws securing the scanner cover. These screws are captive and should remain assembled to the lower flange assembly. Press the radome inwards to release the top. This breaks the seal and makes removal easier.
2. To avoid losing the scanner cover, tie the cord, attached to the inside of the base of the scanner, to the moulded hole provided in the cover.
3. If you have a 24" scanner, unscrew and remove the inner cover:
4. Remove the drain tube from inside the base of the scanner, and insert it into the drain hole as shown in the following diagram. Pull the tube gently from outside the scanner so that it clips into place.

5. Referring to the following illustration, remove the securing nut (1) from the watertight gland (2) and grommet (3), where the inter-unit cable (4) will enter the base.
6. Slide the gland nut (1) and grommet (3) onto the inter-unit cable (4) and insert the cable, still covered by its protective sleeve, through the gland.

7. Carefully cut and remove the protective sleeve to expose the 8-way plug (5) and power cores (7). Place the cable in the earthing clamp (10), ensuring that the exposed wire braid sits in the earthing clamp.

8. Connect the 8-way plug (5) to the connector (6). The correct fitting is with the small arrow marked on the body of the plug facing upwards and to the left hand side. The grey wire will then be at the left hand side and the white wire will be at the right hand side.
9. Connect the red "+" and black "+" power cores (7).
   If you have a 10 m or light 15 m inter-unit cable, there is one pair of cores.
   Connect the red cable lead to one of the terminal sockets marked "++", and
   the black cable lead to one of the sockets marked "+-".
   If you have a heavy 15 m inter-unit cable, there are two pairs of cores. Con-
   nect the red cable leads to the terminal sockets marked "++", and the black
   cable leads to the terminal sockets marked "+-", with one lead in each socket.
   The terminal clamps (8) are operated using a screwdriver (9), as shown in the
   inset diagram on the previous page.
10. Secure the nut (1) on the watertight gland (2), making sure that it grips the
    cable’s outer sheath.
11. Secure the cable with the top clamp (11), using the two screws (12) provided.
    Ensure that the clamp goes around the exposed wire braid, and that the wire
    braid makes contact with the earthing clamp. Tighten the screws until the top
    clamp deforms just enough to contact the lower earthing clamp (see inset).

   CAUTION:
   It is essential that the drain tube is fitted and that the nut on the
   watertight gland is adequately tightened. If this is not done,
   water could become trapped in the scanner and cause irreparable
   damage.
12. Tighten the securing nut (1) again to ensure a waterproof seal.
13. If you have a 4D scanner, replace the inner cover over the connectors.
14. Untie the cord from the scanner cover, and coil it up in the base of
    the scanner unit so that it cannot foul the rotating antenna.
15. Replace the scanner cover, aligning the mark on the cover with the mark on
    the scanner base above the cable gland, and tighten the 4 or 7 captive screws.
    Do not over-tighten these screws.
2.2 Open array scanner

Installation of the open array scanner should only be undertaken by a competent installer. If you have any difficulty with the installation, please contact your local Raymarine dealer or distributor.

The open array scanner is supplied in two sections; the pedestal unit and the antenna. The pedestal unit is secured from below the mounting platform. The open array is then secured to the pedestal. Full details for mounting the scanner are given below.

**CAUTION:**
The pedestal unit has a cap fitted over the open array mounting shaft to protect the protruding co-axial pin. This cap must be left in place until the open array is fitted.
The pedestal base is fitted with a seal: **DO NOT grease this seal.**

**WARNING:**
The open array scanner weighs: 48" scanner - 30 kg (66.2 lb); 72" scanner - 33.4 kg (73.7 lb). For safety reasons it is recommended that the unit is not lifted by one person.
The unit is fitted with lifting eyes (maximum SWL 40 kg) to facilitate the use of standard lifting accessories, e.g. rope, chain or strop. The safe working load (SWL) of the lifting accessories should be 150 kg. Suitable lifting equipment could include a crane, hoist, or an appropriate rigid, overhead structure. Alternatively, the unit is suitable for a two person lift. Care must be taken to ensure that each person is standing on a stable surface, and that the pedestal is held carefully to ensure it cannot slip.
The T-bar beneath the open array antenna can be used to aid lifting.
You should never lift the scanner by holding onto the open array antenna.
Securing the pedestal to the mounting platform

1. Using the paper template supplied with the scanner mounting kit, mark the flat mounting surface with the holes and drill as indicated on the template. Refer to Section 1.2 when selecting the scanner unit site.

2. Stick the four self-adhesive bitumen washers over the mounting holes.

3. Ensure the lifting eyes are securely fitted to the top of the pedestal, and the yellow protective cap is in place.

**CAUTION:**
To prevent damage to the internal mounting bar, ensure the stud penetration is no more than 32 mm into the pedestal base. We recommend you mark each stud with tape, 32 mm from one end, to act as a gauge.

4. Grease the studs with Denso paste (supplied). Using two nuts locked together on the stud, screw each stud into the pedestal to a maximum of 32 mm, or until they bottom out. Remove these two nuts.

**Note:** If the studding supplied is not long enough, use M10 stainless steel, grade A4-70 studding of a suitable length. Refer to the following illustration for details.

5. Using suitable lifting equipment, raise the pedestal over the mounting surface. Carefully lower into position, taking care that the studs pass through the holes without damaging the threads. Ensure that the cable inlet is pointing aft.

**WARNING:**
Support the pedestal unit until it has been secured to the mounting platform. It is important that all four sets of nuts and washers are used to secure the pedestal to the mounting platform.

6. Referring to the following illustration, use the four nuts and associated washers supplied to secure the pedestal. Tighten the nuts to 30 Nm (22.1 lb ft.); ensure the scanner is tightly fitted.

Grease the nuts with Denso paste (supplied).
If required, cut-off any excess stud.
Connecting the open array scanner cable

**CAUTION:**
Before wiring the scanner unit check that it is securely mounted to the platform, then make sure that the inter-unit cable is not connected and power is not applied to the display unit. The scanner switch must be in the OFF position.

**Note:** Connection of the Pathfinder inter-unit cable and the C-series split pedestal cable is identical.

1. Loosen the four self-retaining bolts securing the pedestal lid to the base. Pull-up and turn the bolts anti-clockwise to lock them in the upright position. Remove the lifting eyes.

**Note:** It is important to remove lifting eyes to avoid corrosion. Retain the lifting eyes: they will be required if the scanner is removed from its platform.

2. Open the pedestal lid. Ensure the securing stay has automatically locked into position.

3. Referring to the following illustration, remove the cable gland nut, washer and grommet from the watertight gland, where the cable will enter the base.

4. Slide the cable through the gland nut, washer and grommet, then into the base. Carefully remove the heat shrink shroud, ensuring that you do not damage the cable.
5. Ensure the exposed braid is positioned in the p-clip to provide an earth, then clamp securely into position.
Secure the cable at the entrance to pedestal base using the plastic cable clamp.
Hand tighten the cable gland nut.

6. The cable is supplied prepared and ready to fit to the signal and power connectors. If you need to cut the cable to length, strip off the protective outer sleeve then use the supplied kit to prepare the cable as detailed in the following illustration.
CAUTION:
If any of the wires are incorrectly fitted, the scanner will not function correctly.

1. Preparation of Wires
1. Remove the protective sleeve to a length of 535 mm ± 10 mm.
2. Using wire cutters, carefully remove the earthing braid to a length of 500 mm ± 10 mm.
3. Prepare co-axial wire as shown.

2. Heat Shrinking of Wires
Form the wires into two bundles with heat-shrink tubing (one containing the four power wires and the other containing the eight signal wires).

3. Preparation of Earthing Braid
Apply heatshrink ensuring at least 15 mm of braid is visible. When clamped in position the braid should make full contact with the P-clip.

7. Fit the 8-way plug (supplied in the kit of parts) to the cable as shown in the following diagram. The terminal clamps are operated using a screwdriver as shown.
Connect the plug to the signal connector as shown. When correctly fitted the white wire (co-axial) will be at the outer edge of the unit.
8. Connect the red core(s) to the terminal socket marked “+” and the black core(s) to the terminal socket marked “-”. The terminal clamps are operated using a screwdriver as shown in the inset diagram.

9. Using the tie-wrap fitting on the pedestal lid, secure the cable.

**CAUTION:**
**Do not grease the seal in the pedestal lid.**

10. Check the seal in the pedestal lid is correctly seated.
- Grease the four self-retaining case bolts and thread holes with Denso paste (supplied).
- Close the pedestal lid, ensuring that the cable does not become trapped and that the seal is not pushed-out at the front of the pedestal: it will help if you support the front of the lid (by holding the mounting bracket) as you lower the rear of the lid.

11. Tighten the four self-retaining bolts to 12 Nm (8.8 lb ft.).
- Tighten the cable gland nut 1/2 turn.
**Fitting the open array to the pedestal**

**CAUTION:**
The pedestal unit has a cap fitted over the open array mounting shaft to protect the protuding co-axial pin. This cap must be left in place until the open array is fitted to the pedestal.

1. Remove the cap from the open array shaft. Retain the cap, it will be required if the open array is removed from the pedestal.
2. Grease the four securing studs with Denso paste (supplied).

**CAUTION:**
*If the pin is damaged during the following operation you should contact your service dealer.*

3. Lift the open array into position. Carefully lower the array - to prevent damage to the mounting pin, ensure the array remains parallel to the pedestal so that the studs slot into the holes on the pedestal mounting bracket.

**Note:** The open array mounting bracket is designed so that the array can only be fitted to the pedestal in the correct orientation.

4. Use the four nuts and associated washers supplied to secure the array to the pedestal as shown in the diagram below.
2.3 System Connections

CAUTION:
The display connector on the scanner cable is a moulded plug that cannot be replaced. DO NOT remove this moulded plug.

Do not use an open array scanner with an SL70, SL70 PLUS or SL70RC PLUS 7” LCD display unit. Failure to observe this may result in permanent damage to the display unit.

10 kW open array scanners cannot be directly connected to 12 V systems.

Scanner Connections
The inter-unit or split pedestal cable is connected to the scanner as previously described in Connecting the radome scanner inter-unit cable on page 24 or Connecting the open array scanner cable on page 30.

Display Connections
The inter-unit or split pedestal cable is connected to the display unit with the moulded plug; the following illustration identifies the scanner connector on the various display connector panels.

If you are using an inter-unit extension cable, connect this to the display unit, and connect the supplied cable to the extension cable.

You cannot extend the split pedestal cable or pedestal adaptor cable.

Power Connections
DC power requirements are described in Section 1.5, Power Requirements.

Power for an open array scanner connected to a Pathfinder display and for any radome scanner is supplied via the display unit - refer to your Display Unit Owner’s Handbook for connection details.

An open array scanner is connected to a C-Series display via the split pedestal or adaptor cable. You must use the pedestal adapter cable to connect a C-Series display to an existing open array scanner unit with a standard inter-unit cable; connect the adaptor between the inter-unit cable and the display.

The following connections to the boat’s DC power are required:

<table>
<thead>
<tr>
<th>Color</th>
<th>Connection</th>
</tr>
</thead>
<tbody>
<tr>
<td>Red</td>
<td>Battery +ve (12/24 V)</td>
</tr>
<tr>
<td>Black</td>
<td>Battery -ve (0 v)</td>
</tr>
<tr>
<td>Green</td>
<td>Ground</td>
</tr>
</tbody>
</table>
The open array scanner has a power switch fitted to the pedestal. This switch can normally be left ON. However, if the scanner is being serviced or if any personnel are in the vicinity of the open array, the switch should be set to OFF.

**Connector Panels**

**LCD display**

**CRT display**

**C Series display**
Cable details

The following diagrams - one for the inter-unit cable, one for the split pedestal and adaptor cable - illustrate the connector pins and cable core details.

* Not present on ‘light’, 11 core cables.
Chapter 3: Post Installation Checks and Maintenance

Once you have installed your radar scanner and display unit, and made all the connections, you need to check your installation. You can then set up the radar system, align the scanner and check the display timing. In addition, for a 72” open array scanner you need to set the antenna size to ensure the scanner rests in the correct position when rotation stops.

Set up, alignment and timing checks are performed from the radar system display unit. The procedures are outlined below; full details are provided in the display unit Owner's Handbook. You should read the Pathfinder radar display unit Owner's Handbook and familiarize yourself with the operation of the radar.

EMC Conformance

Always check the installation before going to sea to make sure that it is not affected by radio transmissions, engine starting etc.

3.1 System Checks and Alignment

System check

Before performing the functional test, check the following:

- All securing bolts are fully tightened and mechanical locking arrangements as specified are in place
- All connections have been made
- All connecting wires are secured and protected as necessary

Note: If you are the boat owner and have performed the installation yourself, ask your authorized installation dealer to check the installation before going to sea.

Set up, alignment and timing checks

Switch on and initial set up

On the open array scanner, ensure the power switch on the pedestal is set to ON. To switch on the display unit, press and hold the POWER key until the unit beeps. The magnetron warm-up sequence should start, after which the unit should enter Standby mode.

If necessary, adjust the lighting and contrast.

If required, change the default language settings.
Checking transmission

**WARNING:**
The radar scanner transmits electromagnetic energy. Ensure that the scanner has been installed according to the recommendations given in *Chapter 1*, and that all personnel are clear of the scanner, before switching to transmit mode.

Run through the radar operations described in the display unit *Owner’s Handbook* and check that all the expected data is displayed.

Bearing alignment

When the system is correctly installed, you must check the bearing alignment to ensure that targets appear at their correct bearing relative to the ship’s bow, and adjust the alignment if necessary.

Display timing adjustment

The display timing can be affected by the length of the cable used to connect the scanner to the display unit. This in turn affects the short range accuracy shown on the display.

It is advisable to check the display timing before using the system for navigation.

72” open array position alignment

To ensure the 72” open array scanner rests in correct position when rotation stops, you need to adjust the radar set up as follows:

1. With the display switched on in Radar mode, press **MENU** then press the RADAR SET UP soft key.
2. Use the cursor to select the ANTENNA SIZE option, then press the 6 ft soft key. Press **ENTER** twice to return to the default display.

If the Radar Set Up menu option ANTENNA SIZE is not available, then you have an older version of display software. The 72” open array scanner will operate correctly with this display. However, for details on adjusting the open array stopping-position, please contact your authorized Raymarine dealer or distributor.
3.2 Maintenance

Warnings

The display unit and scanner unit contain high voltage. Adjustments require specialized service procedures and tools only available to qualified service technicians - there are no user serviceable parts or adjustments and the operator should not attempt to service the equipment. The operator should not remove the rear cover of the display or any internal covers in the scanner.

Always turn the radar system off before carrying out any routine maintenance on the scanner or nearby equipment. Switch off the display unit before removing the power cord.

Routine Checks

The radar scanners are sealed units. Maintenance procedures are therefore limited to the following periodical checks:

- Examine the cables for signs of damage, such as chafing, cuts or nicks.
- Check that the cable connectors are firmly attached.
- Make sure the scanner and pedestal are still attached securely to the mounting.
- Once a year, remove, grease and re-attach the mounting bolts securing the scanner and pedestal.

Servicing and Safety

- Raymarine equipment should be serviced only by authorized Raymarine service technicians. They will ensure that service procedures and replacement parts used will not affect performance. There are no user serviceable parts in any Raymarine product.
- Some products generate high voltages, so never handle the cables/connectors when power is being supplied to the equipment.
- When powered, all electrical equipment produces electromagnetic fields. These can cause adjacent pieces of electrical equipment to interact with one another, with a consequent adverse effect on operation. In order to minimize these effects and enable you to get the best possible performance from your Raymarine equipment, guidelines are given in the installation instructions, to enable you to ensure minimum interaction between different items of equipment, i.e. ensure optimum Electromagnetic Compatibility (EMC).
3.3 Problem Solving

All Raymarine products are subjected to comprehensive test and quality assurance programmes prior to packing and shipping. However, if this unit should develop a fault, please refer to the following table to identify the most likely cause and the corrective action required to restore normal operation.

If you still have a problem after referring to the table below, contact your local dealer, national distributor or Raymarine Product Support Department for further advice.

Always quote the product serial numbers. The display unit serial number is printed on the back of the unit, and the scanner serial number is on the back of the scanner near the gland.

Table 3-1: Common Problems and Their Solutions

<table>

**Technical Support:**
Please visit our website at:

www.raymarine.com/recreational/support

where you will find a Questions & Answers database, service information and e-mail access to the Technical Support department.

Alternatively, if you don’t have access to the world wide web, call:

1-800-539-5539 extension 2444 or
(603) 881-5200 extension 2444

Our Technical Support Specialists are available to answer questions about installing, operating and trouble-shooting all Raymarine products.

**How to Contact Raymarine (US)**

**For Marine Product and Services Information**
Visit the Raymarine World Wide Web site for the latest information on the newest Raymarine electronic equipment and systems at:

www.raymarine.com

**For Accessories and Parts**
Many Raymarine accessory items and parts can be obtained directly from your authorized Raymarine dealer. However, if you are in need of an item not available from the retailer, please contact Raymarine Technical Services at:

1-800-539-5539 extension 2333 or
(603) 881-5200 extension 2333.

Technical Services are available Monday through Friday 8:15 AM to 5:00 PM Eastern Standard Time.

Please have the Raymarine item or part number ready when calling if placing an order. If you are not sure which item is appropriate for your unit, you should first contact the Technical Support Department at:

1-800-539-5539 ext. 2444 or
(603) 881-5200 extension 2444

to verify your requirements.
For Product Repair and Service

In the unlikely event your Raymarine unit should develop a problem, please contact your authorized Raymarine dealer for assistance. The dealer is best equipped to handle your service requirements and can offer time saving help in getting the equipment back into normal operation.

In the event that repairs can not be obtained conveniently, product service may also be obtained by returning the unit to:

Raymarine Product Repair Center
22 Cotton Road, Unit D
Nashua, NH 03063-4219

The Product Repair Center is open Monday through Friday 8:15 a.m. to 5:00 p.m. Eastern Standard Time or Eastern Daylight Savings Time. All products returned to the Repair Center are registered upon receipt. A confirmation letter will be sent to you acknowledging the repair status and the product’s reference number. Should you wish to inquire about the repair status of your unit, contact the Product Repair Center at:

1-800-539-5539 extension 2118.

Please have the product reference number, or unit serial number, ready when you call. We will do everything possible to make the repair and return your unit as quickly as possible.

How to Contact Raymarine (Europe)

In Europe, Raymarine support, service and accessories may be obtained from your authorized dealer, or contact:

Raymarine Ltd
Anchorage Park, Portsmouth
P03 5TD, England
Tel: +44 (0) 23 9269 3611
Fax: +44 (0) 23 9269 4642

Or visit the Raymarine World Wide Web site:

www.raymarine.com

Accessories and Parts

Raymarine accessory items and parts are available through your authorized Raymarine dealer. Please refer to the lists of component part numbers and optional accessories in the Installation chapter of this manual, and have the Raymarine part number ready when speaking with your dealer.
If you are uncertain about what item to choose for your Raymarine unit, please contact our Customer Services Department prior to placing your order.

**Worldwide Support**

Please contact the authorized distributor in the country. A list of worldwide distributors is supplied with your system.

5S and 9S 48" Open Array Scanner Unit

**General**

Approvals  
CE - conforms to 1995/5/EC, EN60945  
FCC - conforms to Part 80 (47CFR) and Part 2 (47CFR)

Dimensions  
Pedestal: 427 x 296 x 406 mm (16.8 x 10.5 x 16 in)  
Array: 1306 mm (51.4 in) length

Weight  
Pedestal: 24 kg (53.0 lb)  
Array: 6 kg (13.2 lb)

Environmental  
Waterproof to CFR46  
Temperature range: -10° to +55°C  
Humidity limit: up to 95% at 35°C  
Maximum wind speed for satisfactory operation: 100 Kts

Maximum Range Scale 72 nm

**5S Transmitter - 4 kW**

Input Voltage 10.7 - 44 V DC (from display unit)

Power Consumption  
9.2 W Standby  
46 W Typical operation in light winds  
61 W Max. operation in 50 Kt winds  
96 W Max. operation in 100 Kt winds

Transmitter Frequency 9410 +/- 30 MHz

Peak Power Output 4 kW (nominal)

Transmitter  
Solid state modulator driving magnetron

Warranty iv
**Limited Warranty Certificate**

In order to ensure that the equipment continues to operate efficiently and reliably, we recommend that before using the product, the customer carefully read the Owner’s handbook and follow the advice on the safe and correct operation and use of the product. We recommend that Raymarine equipment, be installed by an approved Raymarine installer.

**Warranty Registration**

Please register your warranty on-line at [www.raymarine.com](http://www.raymarine.com) to ensure smooth warranty processing.

1. **Limited Product Warranty**

Raymarine warrants that all of its product, in the course of normal use, will be free from defects in material and workmanship for a period of 2 years (24 months) from date of sale to the original end user, subject to the limitations set forth in this warranty. The Raymarine warranty covers the parts and labor associated with a warranty repair as described above, provided that the product is returned to Raymarine or one of its approved agents in accordance with Section 3 hereof.

2. **On-board Warranty**

Raymarine will authorize on-board warranty service by the nearest Raymarine approved service agent, subject to maximum mileage and travel times referred to in Section 4, on products where proof of installation, or commission by Raymarine certified installers is shown.

The warranty provides for on-board repair or exchange of the product, by Raymarine or its approved service agents, for a period of 1 year (12 months), subject to the limits contained in this warranty.

In the case of a product installed by a Raymarine certified installer or boat-builder, the warranty commences on date of installation or from the date of sale of the boat to the original end user, subject to the limitations set forth in this warranty.

3. **Obtaining Warranty Service**

In the event of warranty service being necessary, the customer should contact Raymarine Technical Support or the nearest Raymarine approved service agent, the contact details of whom are available on the Internet at [www.raymarine.com](http://www.raymarine.com) or directly from Raymarine.

In cases where the customer is requesting a warranty service on a Raymarine product under this warranty, and where a Raymarine certified installer has not installed the product; i.e. **Limited Product Warranty**, the affected product must be returned to the customers local Raymarine approved service agent or direct to Raymarine with a copy of either:

(a) Proof of purchase showing the date of purchase, the name of the seller and the serial number of the affected product; or
(b) A warranty card completed by the seller of the product containing the information required in (a) above.

In cases where the customer is making a warranty claim on a Raymarine product under this warranty, and where the product has been installed by a Raymarine certified installer, (boat-builder, installer dealer etc.) i.e. **On-board Warranty**, the nearest Raymarine approved service agent should be contacted and on-board service requested (which will be subject to the mileage and travel time limits referred to in Section 4 hereof). Before the installed warranty service is performed, the customer must have available, either:

(a) Proof of purchase showing the date of purchase, the name of the seller and the serial number of the affected product and proof of installation by a Raymarine certified installer; or

(b) A warranty card completed by the seller of the product containing the information required in (a) above.

Subject to the limitations and other provisions set forth in this warranty, the product will be either repaired or replaced by Raymarine within a reasonable period of time and at no further cost to the customer. the determination of whether to repair or replace a product shall be at the sole discretion of Raymarine, and shall be the sole remedy of the customer under this warranty.

---

**4. Warranty Limitations**

Raymarine warranty does not apply to equipment that has been subjected to accident, abuse or mis-use, shipping damage, alterations, corrosion, incorrect and/or non-authorized service, or to a product on which the serial number has been altered, mutilated or removed.

Raymarine assumes no responsibility for damage incurred during installation or as a result of incorrect installation.

This warranty does not cover routine system checkouts, alignment or calibration, sea-trials or commissioning, unless required by replacement of part(s) in the area being aligned.

Magnetrons, cathode ray tubes (CRTs), thin film transistor (TFT) liquid crystal displays (LCDs) and cold cathode fluorescent lamps (CCFLs, hailer horns and transducers are warranted for 1 year (12 months) from date of sale.

Raymarine is not liable and assumes no responsibility for damage caused by or to other equipment, systems or components occasioned by improper or unauthorized connection, or use of the product.

Consumable items, including, but not limited to; fuses, batteries, drive belts, radar mixer diodes, snap-in impeller carriers, impellers, impeller bearings, and impeller shafts are specifically excluded from this warranty.

Overtime/premium labor portion of services outside of normal working hours is not covered by this warranty.

If repairs are necessary under the warranty, the affected product must be forwarded to a Raymarine facility or an approved Raymarine service agent, at the owners expense in a manner set forth in Section 3 hereof.
This warranty does not cover any differences in material, coloring or size between those alluded to in corporate advertising, literature or published on the Internet, which is not specifically objected to at the time of delivery.

Travel costs other than those qualifying for on-board warranty (up to a maximum of 100 auto miles, tolls and two (2) hours travel time), are specifically excluded from the warranty and shall be the responsibility of the customer. Costs, which are excluded from the coverage of this warranty, include, but are not limited to: taxi fares, launch fees, aircraft rental, subsistence, customs, shipping and communication charges etc.

To the extent consistent with State and Federal Law:
The foregoing warranty is Raymarine’s sole warranty and is applicable only to products sold as new. The remedies provided herein are in lieu of:

any and all other remedies and warranties, whether express or implied including but not limited to, any implied warranty of merchantability or fitness for a particular purpose.

all obligations of Raymarine for damages including, but not limited to accidental, consequential or special damages (including punitive or multiple), or any financial loss, loss of profit, business, contracts, opportunity, goodwill or other similar loss arising out of or in connection with the purchase, use or performance of any Raymarine product, even if Raymarine has been advised of the possibility of such damages, and no case shall exceed the cost of the product. The remedies to the customer are herein exclusive.

Some jurisdictions do not allow exclusion or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights and you may also have other rights, which vary from jurisdiction to jurisdiction.

The Raymarine warranty terms and conditions as described herein do not affect the customers statutory rights and comply with EU Directive 1999/44/EC.

Raymarine is the sole author of this policy and makes no further warranties, express or implied unless a separate, specific warranty has been written and provided to the customer. This warranty supersedes and replaces all previous warranties.

All Raymarine products are merely aids to navigation. It is the responsibility of the user to exercise discretion and proper navigational skill, independent of any Raymarine equipment.
